

## Top Ten Reasons to Adopt Mobile Technology

### 10. Paper went out with the Millennium

Keep data from going stagnant on paper forms. Increase work time and all-around efficiency by sending data to the point-of-performance and capturing data as you work—avoid rekeying after-the-fact.

### 9. Accurate data is like gold

Mobile solutions have helped companies capture up to 30% more data in their back-end systems. Better quantity and quality data leads to better overall reporting, scheduling and planning.

### 8. Integrated functionality doesn't mean a headache

If it's built using SAP's latest technology, mobile technology can offer solid integration without interrupting or interfering your organization's existing SAP customizations or standard SAP objects.

### 7. Even the most remote employee can use it

With data on the device, remote employees can work regardless of connectivity. Online, offline or occasionally connected, updates are automatically transmitted in the background without interruption to the user.

### 6. It's as simple as going to the ATM

Business rules enforced on the device by an intuitive action-driven interface (wizards, drop-downs, clickable image control, and more) guide remote employees through their business processes.

### 5. Crisis aversion is a good rule of thumb

Easily comply with government regulations by capturing an e-audit trail including time and date stamps. Mobile technology promotes safe and secure operations for reduced accidents and better decisions.

### 4. Unhappy customers spread the word

Promptly and accurately, respond to customers to substantiate good customer service. Plus, provide up-to-date information with the remote ability to view, create and modify data in the back-end(s).

### 3. Today's workers expect it

This generation is accustomed to instant information and mobile devices. Record the knowledge of long-time, experienced workers in intuitive workflow to reduce the training time for new employees.

### 2. Your competitors are using it

If your organization is still using conventional paper methods, the competition is pulling ahead. Stay on the forefront of technology and use mobile solutions to capture and access data from the field.

### 1. There are more pros than cons!

Mobile technology offers your organization the benefits of lower costs, improved productivity, a 360° view of operations and full utilization of your SAP® Systems—there's no solid reason not to adopt it.
